FAHIM FAISAL DEEPTO

AI Engineer | Applied AI & Agentic AI | AI Product Manager

Dhaka, Bangladesh | 01534403341 | faisal.deepto@gmail.com

LinkedIn | GitHub | Google Scholar

Professional Summary

AI Engineer with a Computer Science background and an MSc in Intelligent Computing, with a career focused on applying AI to real-world problems. Started with Machine Learning, Deep Learning, and Computer Vision during undergraduate study, progressed into applied healthcare AI research and AI product development, and now works on AI-agent systems and evaluation. Experienced across the AI lifecycle from problem formulation, data analysis, model development, and rapid prototyping to LLM workflows, agent testing, MCP/connectors, document intelligence, and system evaluation. Combines technical AI engineering capability with practical experience in customer requirements, product feasibility, stakeholder communication, and translating user needs into implementable AI solutions.

Core Skills

- **AI & Machine Learning:** Machine Learning, Deep Learning, Generative AI, LLMs, Prompt Engineering, Model Development, Model Evaluation, Model Tuning, Ensemble Methods, Computer Vision, YOLO
- **Agentic AI:** AI Agents, Agent Workflows, Agent Evaluation, MCP, Tool & Connector Integration, Agent Configuration, Document Parsing, LLM Workflow Testing
- **Programming & Data:** Python, SQL, JavaScript, Pandas, NumPy, Scikit-Learn, Statistical Analysis, Data Pipeline Design
- **AI Product Engineering:** AI Product Prototyping, Feasibility Analysis, Rapid Prototyping, Requirements Analysis, User-Need Analysis, Workflow Design, Automation
- **Engineering & Delivery:** APIs, System Integration, Git, OOP, Software Architecture, Design Patterns, Agile/Scrum

Professional Experience

TigerIT Bangladesh Ltd. - Dhaka, Bangladesh

Innovation Engineer - AI Product & Agent Engineering *Nov 2025 – Present*

- Prototype and evaluate AI-driven product concepts by translating emerging technologies, market needs, and user problems into technically feasible AI opportunities.
- Work on AI-agent testing and evaluation, validating agent workflows, configurations, tool usage, and behavior across practical user scenarios.
- Test AI-agent integrations using MCP and external connectors, including workflows involving GitHub, Notion, Linear, Sentry, Dropbox, Asana, Google Drive, Gmail, Google Chat, and Slack.
- Design and execute document-intelligence test suites covering standard documents, image-heavy documents, and standalone images to evaluate AI system behavior across different input types.
- Evaluate AI-agent settings and workflows to identify failure cases, behavioral limitations, configuration issues, and opportunities for improvement.
- Compare AI-agent and harness approaches to assess capabilities, workflows, system requirements, and practical usability.
- Prototype AI-powered product concepts and validate ideas through structured experimentation, rapid prototyping, and iterative testing.
- Investigate technical and product issues across AI features, integrations, communication systems, and cross-platform workflows, collaborating with product and engineering stakeholders to validate fixes.
- Build automation utilities, structured configurations, and workflow assets to accelerate experimentation and reduce repetitive work.
- Translate customer and stakeholder requirements into technical workflows while balancing implementation feasibility, product value, and user needs.
- Contribute to feasibility analysis, sprint planning, technical documentation, product concepts, and stakeholder communication.

Institute of Research, Innovation, Incubation and Commercialization (IRIIC), UIU - Dhaka, Bangladesh

Research Engineer - Applied AI/ML *Jun 2025 – Oct 2025*

- Designed and prototyped AI/ML solutions and AI-driven product concepts for healthcare, translating open-ended domain problems into structured and testable technical approaches.
- Applied AI, machine learning, and data-analysis methods to real-world healthcare problems using data from the SuSastho pharmacy-based telemedicine platform in Bangladesh.
- Built a 6-stage Python analytics pipeline processing 9 real-world healthcare datasets to study longitudinal patient outcomes and NCD trends.
- Applied statistical analysis and significance testing across five time periods, identifying a statistically significant reduction in "Not Improved" patient outcomes.
- Conducted research and industry gap analysis to identify unmet needs and define potential AI-driven solutions.
- Worked across problem formulation, data preparation, analysis, prototyping, evaluation, and interpretation to translate healthcare requirements into practical AI solutions.

Inneed Cloud - Dhaka, Bangladesh
IT Business Analyst *Oct 2022 – Mar 2023*

- Proposed and presented an ML-based solution concept to a2i (Aspire to Innovate) for a pregnancy-related healthcare challenge, framing a data-driven approach for stakeholder evaluation.
- Proposed an automated candidate-screening solution for Augmedix's hiring pipeline, replacing manual phone-based speaking assessments with an MCQ grammar test and an AI-scored reading test that transcribes candidate speech to evaluate language proficiency.
- Gathered and analyzed functional requirements directly from clients and translated business needs into actionable technical and project specifications.
- Managed project activities including tender documentation, resource coordination, and cross-functional communication.
- Served as Scrum Master, facilitating sprint ceremonies and maintaining alignment across delivery teams.
- Identified and resolved cross-functional blockers to support timely project completion.

Education

United International University - Dhaka, Bangladesh
MSc in Computer Science and Engineering - Intelligent Computing *Jun 2024 – Present*
CGPA: 3.22

Thesis: Longitudinal Analysis of Patient Health Outcomes and NCD Trends Using SuSastho Pharmacy-Based Telemedicine Data
Supervisor: Prof. Khondaker Abdullah Al Mamun, PhD

North South University - Dhaka, Bangladesh
BSc in Computer Science and Engineering *Jan 2018 – Sep 2022*
CGPA: 2.83 / 4.0
AI-focused coursework: Machine Learning, Deep Learning

Projects

SuSastho Telemedicine - Healthcare Analytics & AI Research

- Designed and executed a 6-stage Python analytics pipeline across 9 real-world healthcare datasets to analyze longitudinal patient outcomes and NCD trends.
- Applied statistical testing to evaluate outcome changes across five periods and identify measurable improvement trends.

YOLO - You Only Live Once | Real-Time Car Crash Detection

- Developed an ensemble computer-vision system combining dashboard-camera video with multiple data sources to detect vehicle collisions in real time.
- Achieved 90% detection accuracy through iterative model development, testing, and tuning.
- 3rd Place - NSU ACM Innovation Challenge.

Kemne Jabo! - Route Planning & Travel Information Platform

- Developed a full-stack route-planning and travel-information platform combining route recommendations with a query-answering interface.
- Selected as one of the Mujib 100 Ideas for its innovation and practical problem-solving concept.

Data Transparency and Historic Trends in Traffic Accidents

- Conducted comparative analysis of national road-accident statistics in Bangladesh to identify data-transparency gaps and support road-safety research.

Research & Recognition

- **Research:** Applied AI/ML and healthcare analytics research with work targeting peer-reviewed publication.
- **Google Scholar:** Available at the profile linked in the header.

Leadership

General Secretary - North South University Computer & Engineering Club *Apr 2022 – Apr 2023*
General Member - Engineering Students' Association of Bangladesh *Jan 2019 – Dec 2020*
